DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 19 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 19 recites the limitation "said optical element" in the second to the last line. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 7029816 (Hayata et al).

JP 7029816 shows a projection exposure apparatus comprising:

an illumination optical system (1-12), including an integrator (6) and masking means (10);

a projection optical system (13, 14);

measuring means for measuring telecentricity (figure 3);

changing means (lens 8) between said optical integrator and masking means.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 18-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 7029816 as applied to claims 16 and 17 above, and further in view of JP 6244083 (Haginiwa et al).

JP 7029816 shows all the elements except for the second adjusting means for adjusting an illumination distribution. JP 6244083 shows an exposure apparatus which changes the illumination distribution. At the time of the invention, one of ordinary skill in the art would have modified the exposure apparatus of JP 7029816 with the illumination distribution system of JP 6244083 in order to ensure that the exposure light is evenly distributed across the exposure area.

As for claim 23, although JP 6244083 does not show the optical element disposed at the light entrance of the optical integrator. At the time of the invention, it would have been obvious to one of ordinary skill in the art to place the optical element at the light entrance of the optical integrator since the reversal of parts involves only routine skill in the art. In re Einstein, 8 USPQ 167.
